The 2017 Data Breach Investigation by Verizon

The threat at health care

6 % Partner

32% External

68% Internal

At top industrials: Public, Finance, Healthcare

81,6 % internal data breach

“With employee like this, who needs enemies”

Why training at the workplace

The Hospitals / the companies

more interesting target then individuals

@_j3lena_

The Humans

*are not interested to learn in private time
about safe behavior on the Internet*

*are more open for learning at their work
time*

*run away from tech because they don't
like it or simply don't understand it*

[@_j3lena_](#)

The basic training

3 parts and 3 goals

- 1. About the data they give - **make them interested***
- 2. About the risk of given data - **make them more interested***
- 3. The Workshop/Training - **teach them***

@_j3lena_

First step: the data - get interested

realizing that they are giving their own data too

[@_j3lena_](#)

*The knowledge what can happen with their data and
to them*

[@_j3lena_](#)

Now they are open for the third part

The workshop, the learning process, to show what and how they can protect and themselves and the company

[*@_j3lena_*](#)

- *Simplicity and as less possible tech*
- *Making the connection between employees and IT*
- *With understanding, employees will easily accept the rules*
